

Kafka 101

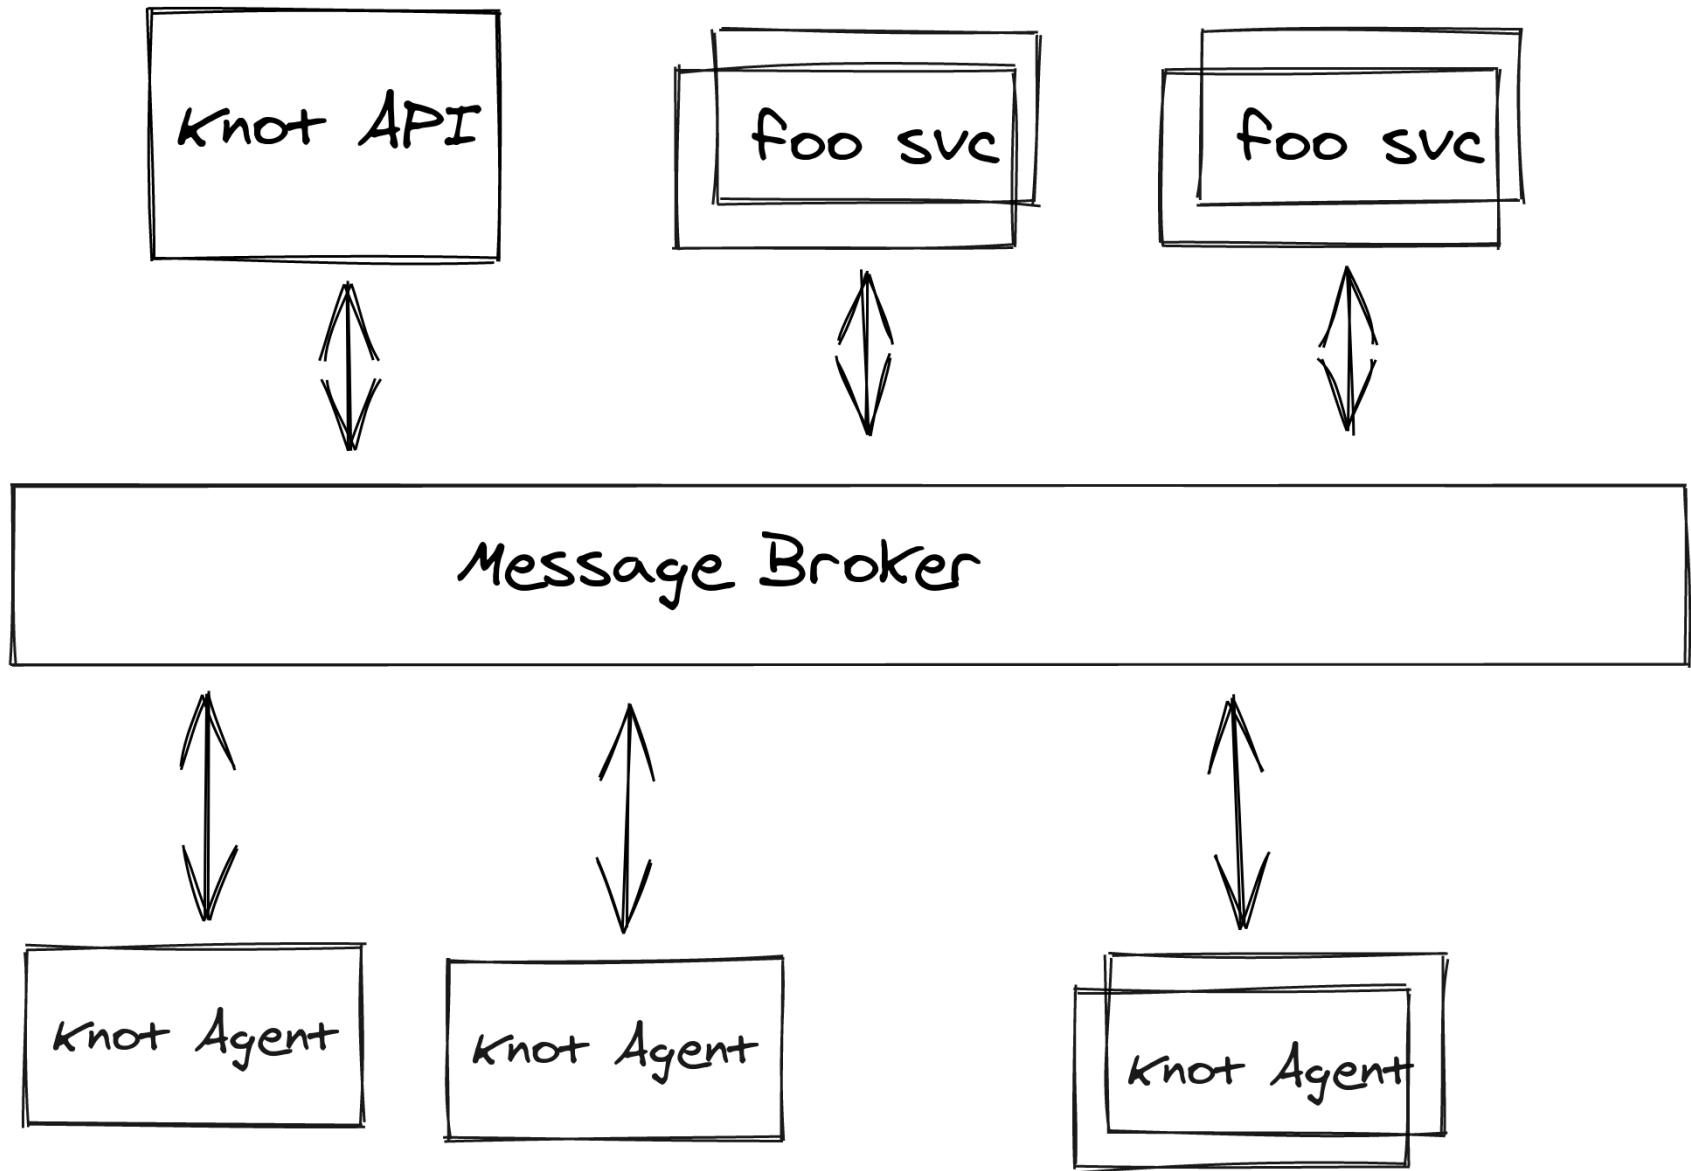

A gentle introduction

Azzam S.A

Why?

Kafka vs RabbitMQ

- Message ordering
- Message routing
- Message timing
- Message retention
- Fault handling
- Scaling
- Consumer complexity
 - RabbitMQ: smart-broker, dumb-consumer
 - Kafka: dumb-broker, smart-consumer

When to use which

- RabbitMQ: Command
- Kafka: Event
 - Package tracking
 - Movie recommendation
 - Surge pricing

What?

Kafka Component - Bird View

topic

partition 1

partition 2

partition 3

Topic

- Replication
- Partition
- Offset
- Retention
- Immutable

How - Installation

YAML

```
services:
  zookeeper:
    image: wurstmeister/zookeeper
  kafka1:
    image: wurstmeister/kafka:2.12-2.4.0
    ports:
      - "9092:9092"
    environment:
      KAFKA_ADVERTISED_HOST_NAME: 103.93.59.207
      KAFKA_ZOOKEEPER_CONNECT: zookeeper:2181
```

Creating topics

```
#!/usr/bin/env bash
```

BASH

```
# kafka-topics is alias to kafka-topics.sh --bootstrap-  
server localhost:9092
```

```
kafka-topics --list
```

```
kafka-topics --create --topic bus-location # --  
replication-factor 1 --partitions 2
```

```
kafka-topics --describe --topic bus-location
```

Producing messages

```
#!/usr/bin/env bash
```

BASH

```
# kafka-producer is alias to kafka-console-producer.sh --  
bootstrap-server localhost:9092
```

```
kafka-producer --topic bus-location
```

Consuming messages

```
#!/usr/bin/env bash
```

BASH

```
# kafka-consumer is alias to kafka-console-consumer.sh --  
bootstrap-server localhost:9092
```

```
kafka-consumer --topic bus-location # --from-beginning
```

Consumer

- Consumer Group
- Load balance
- Reliability

More

```
#!/usr/bin/env bash
```

BASH

```
kafka-topics --create --topic bus-fuel --partitions 2
```

```
kafka-consumer --topic bus-fuel --group traffic # twice
```

Python

PYTHON

```
from kafka import KafkaProducer
from kafka import KafkaConsumer
```

```
# Producer
```

```
producer =
KafkaProducer(bootstrap_servers="localhost:9092")
```

```
for count in range(100):
    producer.send("bus-location", count)
```

```
# Consumer
```

```
consumer = KafkaConsumer("bus-location")
```

```
for msg in consumer:
    print(msg)
```

“Paths are made by walking.”

— Franz Kafka
